Summary

I am a Senior Research Scientist and Manager at Adobe Research, where I focus on developing generative models for image creation and editing. Recently, I've been leading efforts to build unified multimodal models that handle both generation and understanding tasks. Previously, I spearheaded image editing technologies for inpainting and outpainting, which now power Generative Fill and Expand in Photoshop, Lightroom, and Firefly. This work was recognized by TIME as one of the Best Inventions of 2023. I have published over 50 research papers in top-tier computer vision and machine learning conferences, including CVPR, ICCV, ECCV, NeurIPS, ICLR, and SIGGRAPH, and have filed more than 50 patents in the areas of generative AI, vision, and multimodal systems.
